Mubin Attar

APPLIED AI ENGINEER · GENAI · LLMS · MLOPS

Ahmedabad, India · sk.mubinattar@gmail.com · www.linkedin.com/in/mubin-attar-53223716a · github.com/mubin-attar-007

SUMMARY

Applied AI Engineer with 3+ years in software engineering and a production-AI focus since 2024. I build LLM applications, agentic and RAG systems, predictive ML, and healthcare automation across FastAPI, Next.js, PostgreSQL, and Docker. Four public AI projects document my work in authentication, CI/CD, validation, and task-level evaluation.

TECHNICAL SKILLS

Languages	Python, JavaScript / TypeScript, SQL
GenAI / LLM	LangChain, LangGraph, RAG, pgvector, prompt engineering, agents, multi-provider routing (Gemini, GPT, Claude, Groq)
Machine Learning	scikit-learn, XGBoost, neural networks, pandas, NumPy, model training & evaluation
Backend	FastAPI, Django / DRF, SQLAlchemy, REST APIs, async, Argon2 auth, Playwright & Selenium automation
Frontend	Next.js, React, TypeScript, Tailwind CSS
Data / DevOps	PostgreSQL, SQL Server, Redis, Docker, AWS, GitHub Actions (CI/CD), ETL, Vercel, Hugging Face
Practices	MLOps, testing (pytest), OOP, DSA, secure API design, observability

EXPERIENCE

Sevina Technologies — AI/ML Engineer *Ahmedabad · 2024 – present*

- Build and ship production AI & automation systems for healthcare — end-to-end pipelines (Python, Playwright, Selenium) that extract, validate, and synchronize clinical, resident, and demographic data into SQL Server, with logging, reconciliation, and error recovery.
- Developed an AI clinical decision-support platform that turns CMS MDS assessments into interactive dashboards, compliance findings, and reimbursement insights (HIPPS/PDPM) for skilled-nursing facilities via automated PDF extraction and deterministic, guideline-aligned rules.
- Built Generative AI applications — LLM document-analysis assistants with multi-provider routing (OpenAI, Claude, Gemini), RAG, and validated structured output — plus a FastAPI eligibility-verification service with async batch processing, Dockerized deploys, and CI/CD.

Linescripts Software Pvt Ltd — Junior Python Developer *Pune · 2022 – 2024*

- Delivered end-to-end web applications — including a Hospital Management System and e-commerce platforms — with Python, Django & DRF, and responsive HTML5/CSS3/JavaScript/Bootstrap frontends.
- Built RESTful APIs and backend services, integrated third-party APIs, and collaborated cross-functionally on requirements, design, and testing.

FEATURED PROJECTS — CASE STUDIES & SOURCE CODE

DBWhisper live · github

Natural-language-to-SQL agent — LangGraph pipeline, schema-aware pgvector retrieval, multi-LLM fallback, and a fail-closed read-only safety layer.

`101/139 Spider dev · 18/22 golden-set exact · 4/4 unsafe prompts refused · FastAPI · LangGraph · Next.js`

TradePulse live · github

Quant backtesting platform with next-bar execution, costs modeled by default, Decimal accounting, and an AI copilot grounded in the backtest results.

`Look-ahead canary + cash-conservation tests green · FastAPI · Next.js · TimescaleDB · Redis`

CrownWager live · github

Sports-betting analytics & ML predictions — +EV best bets, a validated XGBoost model, cross-book arbitrage finder, and a graded, verifiable track record.

`65.2% ± 0.8% XGBoost accuracy (5-fold CV) · Django/DRF · FastAPI · Next.js`

LLM Studio github

Multi-user, ChatGPT-style AI chat SaaS — Argon2id auth, per-user tenancy, token streaming, OpenAI-compatible multi-LLM routing, and a shared-key daily quota.

`Per-user tenancy · 31 tests · FastAPI · Postgres · Docker · CI`

EDUCATION

Master of Computer Applications (MCA) — Savitribai Phule University of Pune *2021 · CGPA 8.0*
